

Rome, 11-15 July 2016
**“SUMMER SCHOOL IN HEALTH CARE
MANAGEMENT”**

The welfare state of many countries has been urged to be revisited in light of economic crisis and the shrinking of public finance. In addition, the incidence of elderly people on the whole population is much greater than in the past and the demand of patients is radically changed.

In this context, in order to keep up with the expectations of high quality of care without waste of resources, health care executives are urged to update their managerial competences and skills, improving their knowledge regarding on how to promote and lead innovation, implement change effectively and monitor the results.

The Italian health care system is one of the few in the world that guarantees an actual universal coverage with excellent clinical outcomes and with an efficient use of resources. For the foreigner participants learning health care management in Italy will be definitely a stimulating experience.

TOPICS AND TEACHING METHODS

The course program is structured around seven logical blocks:

1. sustainability in Health care;
2. strategic organization desing;
3. operations management;
4. integrated care;
5. strategy and performance evaluation;
6. innovation management;
7. leadership and people management.

Conceptual frameworks, case discussions and skill-oriented activities will be applied to each topic.

Furthermore, two field visits are planned within the course at:

1. **University Teaching Hospital “Agostino Gemelli” of Rome.**

The visit and meeting with the top management will be focused on the organization and management tools used in the management clinical operations and patients flows logistics. Visit to the Operating Room Platform: an innovative model of integrated logistics.

2. **Local Health Unit (Casa della salute) in Emilia Romagna.**

The visit and meeting with the top management of this structure will be focused on the organization and management tools of a new organizational model in wich primary care and social activities are highly integrated to respond, through on holistic approach, to the complex needs of elderly patients.

All lectures are run in English
